

BATEGU

RAIL VEHICLE COMPONENTS

For more than 70 years, renowned international manufacturers in the rail vehicle industry as well as railway operators around the world have been relying on the dependable premium quality of BATEGU. BATEGU rail vehicle components are used in both interior and exterior applications within a wide range of vehicles and bogies, such as subways, trams, railcars and locomotives. Passenger safety and fault-free operation throughout the component's lifetime are the focus of products developed and manufactured by BATEGU for the rail industry. Anti-vibration elements by BATEGU protect against shock, dampen vibrations and sound, therefore improving the smooth running and safety. They reduce wear, are reliable and comply with the state of the art by fulfilling at least R9 EN 45545.
